SUMMARY

Software Engineer with 10+ years of professional experience in software development, system integration, Linux-based systems, and automation across the automotive, retail, and telecommunications industries.

Currently building AI-focused projects involving Generative AI, LLM-based applications, RAG, AI agents, multi-agent systems, and business process automation, with an emphasis on sales and customer service solutions.

Seeking opportunities to combine my software engineering background with Applied AI and intelligent automation to develop practical solutions for real-world business needs.

SKILLS

- **Core:**
  Python, C/C++, Linux, Full Software Development Life Cycle (SDLC).

- **Additional:**
  JavaScript, TypeScript, React, REST APIs, XML, JSON, Web Services, HTML/CSS, Git/GitHub, Bash/Shell, Excel/VBA

- **Currently developing:**
  AI Engineering, Generative AI, LLM-based Applications, AI Agents, AI-driven Business Automation, Multi-Agent Systems, n8n, Supabase, Retrieval-Augmented Generation (RAG), Model Context Protocol (MCP), AWS, Azure and GCP Cloud Fundamentals, Databases/SQL

EDUCATION

- M.Sc. Computer Science, Autonomous University of Guadalajara (UAG) — 2016 - 2018
- B.S. Electronics and Communications Engineering, National Polytechnic Institute (IPN) — 2008 - 2012

CERTIFICATIONS & TRAINING

- Google Cloud Computing Foundations Certificate — In Progress
- Microsoft Generative AI Fundamentals — In Progress
- CPA - C++ Certified Associate Programmer — 2023

PROFESSIONAL EXPERIENCE

Independent / Freelance Software Engineer
Oct 2025 – Present

- forzeswater.com — Built and deployed a business website (Lovable, React, TypeScript) for a water-treatment company. Currently evolving it into a multi-agent sales and customer-service platform using LLMs, RAG and n8n workflows to answer product inquiries and automate quotation follow-ups.
- alanisael.com — Built and deployed a fundraising website (Lovable, React, TypeScript) to support my son's soccer journey, integrating Stripe and PayPal donations and an interactive penalty-kick game.
- garciaisael.com — Customized an open-source React, TypeScript, Three.js and GSAP 3D portfolio into my own professional site, adapting the 3D character in Blender, the scroll-driven animations and all content sections.

Senior Software Engineer – CAPGEMINI (Automotive)
Nov 2019 – Oct 2025

- Contributed across the full software development lifecycle, including business and technical requirements analysis, software development, system integration, architecture, testing, and technical documentation.
- Worked with C/C++, Python, and Linux-based development environments across software development, automated testing, integration, and debugging activities.
- Collaborated with cross-functional teams and stakeholders to translate business needs and technical requirements into effective software solutions.
- Participated in code reviews, design reviews, integration activities, and continuous improvements to software quality and development processes.

Software Engineer – TOSHIBA (Retail and POS)
Apr 2018 – Nov 2019

- Worked on Linux-based retail and Point-of-Sale (POS) platforms, integrating Java and Python packages and supporting customization, validation, and deployment activities.
- Integrated third-party software, libraries, and system packages into customized product environments.
- Customized browser-based applications for retail kiosk solutions and supported software deployment and packaging activities.
- Diagnosed application and system issues, performed root-cause analysis, and collaborated on software validation and platform stability.

Software Engineer – CONTINENTAL (Automotive)
Nov 2015 – Apr 2018

- Developed and maintained software components and APIs for production systems.
- Supported software releases, integration, validation, and technical documentation across multiple development stages.
- Collaborated with cross-functional teams to explain software architecture and support automated deployment and validation processes.

Network Engineer – ERICSSON (Telecommunications)
Mar 2013 – Nov 2015

- Automated KPI analysis and reporting using Python and Excel/VBA for large-scale telecommunications networks.
- Improved recurring data analysis and reporting workflows by reducing manual processing through automation.
